

# Frontend Developer Technical Test - swipejobs

You are tasked to create a page that displays jobs that were matched for users in a job matching site. Please feel free to use any framework. The page should look something similar to the image below and include appropriate actions where applicable.

When creating the page, as well as thinking about making the implementation fast and simple, also consider the following:

- modularity
- testability
- responsive design
- use of open source libraries and frameworks
- coding practices, structuring and readability

**swipejobs** Jim Rose

**Construction General Helper**  
C.D. Barnes & Associates

Distance

Hourly Rate

**5.6 miles** **\$13.50**

**Shift Dates**  
 APR 7, WED 8:00 AM - 10:00PM PDT  
APR 7, WED 8:00 AM - 10:00PM PDT

**Location**  
 123 Main Street, Tacoma, WA 98409 >  
5.62 miles from your job search location

**Requirements**  
 - Safety Vest  
- Hard Hat

**Report To**  
 Dave (123) 546 987

No Thanks I'll Take it

# Frontend Developer Technical Test - swipejobs

A simple API has been provided at <https://test.swipejobs.com> for use by workers to view their profile, review their matched jobs and to accept and reject jobs.

A worker with an ID of 7f90df6e-b832-44e2-b624-3143d428001f has been created in the system for test purposes.

There are a number of (currently unauthenticated) GET URLs which can be used for this worker.

**`https://test.swipejobs.com/api/worker/{workerId}/profile`**

Retrieves the user profile for display

**`https://test.swipejobs.com/api/worker/{workerId}/matches`**

Shows all the jobs which match this worker

**`https://test.swipejobs.com/api/worker/{workerId}/job/{jobId}/accept`**

Accept a job with the given id for worker

**`https://test.swipejobs.com/api/worker/{workerId}/job/{jobId}/reject`**

Reject a job with a given id for a worker
